

Women in Tech & AI Global Awards 2026

Joyce Mi | AI & Digital Transformation Leader | Supporting Evidence

Prepared for portal entry on 30 September 2026. This material does not claim nomination acceptance, finalist status or an award.

Executive Profile

Joyce Mi is Founder of GGC Games and a global game operator focused on AI-native product strategy, commercialization, LiveOps and international publishing. Her career spans Microsoft, Tencent, Zynga and Gameloft, with hands-on work across product, analytics, monetization, user acquisition, market entry and organization design.

She is the author of *Game Operations and Global Expansion: Strategies, Methods, and Skills* (China Machine Press, 2024; byline: Ai Xiaomi), a Tencent entrepreneurship-community mentor and an industry speaker.

Why this category

Her recent work redesigns operating processes around AI: research -> decision -> product review -> commercialization -> launch -> LiveOps -> measurement. AI is used to challenge assumptions, compress research and production cycles, and make senior operating judgment reusable while explicit human review and accountability remain in place.

2025-2026 transformation evidence

Evidence	Measurable scope / operating change
Public commercial operating system	Bilingual GGC business platform with 14 capability domains and 16 scoped services , converting senior operating expertise into repeatable workflows.
AI-assisted operating stack	Market research, product review, monetization, LiveOps, user acquisition, international publishing, content QA and executive decision support organized as one operating system.
Multi-product portfolio	Public product surfaces span games, education, culture, wellness and science. Internal 2026 portfolio inventory groups work into 7 product universes , 30+ products/product lines and 30+ AI prototypes/experiments .
Industry knowledge transfer	2026 public speaking on AI-driven user acquisition and validation for games and apps; source-linked industry contribution record extends from 2019 to 2026.

Professional foundation & public proof

Current role

Founder, GGC Games; AI-native global game commercialization and operating systems.

Career

Microsoft, Tencent, Zynga and Gameloft; 15+ years across games and product.

Publishing

Author, Game Operations and Global Expansion: Strategies, Methods, and Skills, China Machine Press, 2024.

Speaking

Selected invited talks and industry contributions from 2019-2026 across international publishing, LiveOps, user acquisition, monetization, AIGC and AI-native operating practice.

Mentorship

Tencent entrepreneurship-community mentor / industry educator.

Public portfolio

GGC Business, AI Bible for Kids, Dharma Atlas, Earth Healing, QuriAtlas and MEMO.

Evidence note: career/project metrics on owned properties are first-party records unless an external source is explicitly listed. The award submission should distinguish these from independently verified third-party reporting.

Form-ready narrative

Key Results & Contributions (past 12 months)

Over the past 12 months, Joyce Mi has turned 15+ years of global game-operations judgment into an AI-native operating system for product, commercialization and international publishing. She led the build-out of GGC's AI-assisted workflow across market research, product review, monetization, LiveOps, user acquisition, publishing, content QA and executive decision support. She also launched a public bilingual commercial platform with 14 capability domains and 16 clearly scoped services, plus a multi-product portfolio spanning games, education, culture, wellness and science. In 2026 she shared a public framework on AI-driven user acquisition and validation for games and apps. Her work focuses on using AI to shorten decision cycles, improve evidence quality and make senior operating knowledge reusable by teams rather than replacing human judgment.

Nomination Reason

Joyce is a strong candidate for AI & Digital Transformation Leader because her contribution is not a single AI feature; it is the redesign of how game and consumer-product teams make decisions. She combines product strategy, data, monetization, LiveOps, user acquisition, global publishing and operating governance, then embeds AI at each stage with explicit human review and evidence gates. This is grounded in a career across Microsoft, Tencent, Zynga and Gameloft, followed by entrepreneurship and advisory work. In 2025-2026 she converted that experience into repeatable AI-native workflows and public product systems, while continuing to teach, publish and speak. The distinctive contribution is operational: AI is used to challenge assumptions, accelerate validation and improve execution quality while accountability remains with human leaders.

Short Bio

Joyce Mi is Founder of GGC Games and a global game operator focused on AI-native product strategy, commercialization, LiveOps and international publishing. Her career spans Microsoft, Tencent, Zynga and Gameloft, with hands-on work across product, analytics, monetization, user acquisition, market entry and organization design. She is the author of *Game Operations and Global Expansion: Strategies, Methods, and Skills* (China Machine Press, 2024; published under the byline Ai Xiaomi), a Tencent entrepreneurship-community mentor and an industry speaker. At GGC, she is building an AI-assisted operating stack that turns senior judgment into reusable workflows across research, review, launch and ongoing operations, while keeping human accountability at the center of decisions.

Portal fields confirmed on the official 2026 nomination form: one award category per submission; three narrative fields up to 1,500 characters each; up to three supporting files; profile image required for an individual nomination.
